

# AI Intent Intelligence Platform

## Product Requirements & Implementation Plan (MVP)

---

### 1. Project Overview

#### Vision

Build an AI-powered GTM platform that continuously monitors buying signals across a user-defined Ideal Customer Profile (ICP), identifies companies entering a potential buying window, explains why they were surfaced, keeps humans in complete control of every decision, and automates research, enrichment, and outreach only after explicit approval.

The product should feel like an **AI Revenue Intelligence Assistant**, not another cold-email automation tool.

---

### 2. Product Philosophy

The platform follows four core principles.

#### Human in the Loop

AI recommends.

Humans decide.

Nothing happens automatically beyond monitoring and analysis.

No outreach should ever be sent automatically.

---

#### Explainable AI

Every recommendation must explain itself.

The user should always know

- why the company appeared
- which signals contributed

- how confident the system is

The platform should never behave like a black box.

---

## Modular Architecture

Every module should be replaceable.

The monitoring engine should not care where the data came from.

Future enterprise providers should plug into the ingestion layer without affecting downstream logic.

---

## MVP First

This project exists to demonstrate

- GTM thinking
- AI reasoning
- Product thinking
- Workflow automation
- Human-centered AI

Avoid enterprise complexity.

Use only free or generous free-tier services.

---

## 3. Target Users

Primary users

- Solo Founders
  - SDRs
  - Account Executives
  - GTM Engineers
  - RevOps Managers
-

## 4. User Journey

---

## 5. Technology Stack

### Frontend

- Lovable
- React

- TailwindCSS

#### Backend

- Supabase
- PostgreSQL
- Supabase Edge Functions

#### Automation

- n8n

#### AI

- Gemini

#### CRM

- HubSpot Free

#### Contact Enrichment

- Apollo Free

#### Company Research

- Firecrawl

#### or

- Jina AI Reader

#### Monitoring

- RSS Feeds
- Google News RSS
- Reddit API
- Company Career Pages

#### Authentication

- Supabase Auth

---

## 6. Core Modules

---

## Module 1

Campaign Management

Users can

Create

Pause

Resume

Archive

Multiple campaigns are supported.

Each campaign contains

- Campaign Name
- ICP
- Intent Signals
- Intent Threshold
- Monitoring Frequency
- Status

Status

Active

Paused

Archived

---

## Module 2

ICP Builder

User defines

Industry

Employee Size

Country

Revenue (optional)

Keywords

Departments

Target Personas

Apollo builds

Target Account List

Companies stored inside Supabase.

The monitoring engine only watches these companies.

Never monitor the entire internet.

---

## Module 3

Monitoring Engine

Runs automatically.

Default frequency

Every 6 hours.

For each monitored company

Collect events.

Convert events into signals.

Store signals.

No AI yet.

---

## 7. Buying Signals

Only implement free sources.

---

## Company Events

Monitor

Funding

Product Launch

Expansion

Partnership

Acquisition

New Office

Sources

Google News RSS

Company RSS

Company Blogs

---

## Hiring Activity

Monitor openings for

SDR

AE

Marketing Ops

RevOps

Customer Success

Sales Enablement

Sources

Greenhouse

Lever

Ashby

Company Careers

---

## **Company News**

Monitor

Announcements

Press Releases

Expansion

Awards

Growth News

Sources

Google News RSS

RSS

---

## **Community Signals**

Monitor

Relevant Reddit discussions

Examples

Looking for CRM

Need sales automation

Scaling outbound

Source

Reddit API

---

## **CRM Signals**

Monitor

Existing contacts

Old opportunities

Previous engagement

Existing HubSpot records

---

## **DO NOT BUILD**

Website visitor tracking

Leadfeeder

RB2B

Clearbit Reveal

Bombora

6sense

LinkedIn scraping

Twitter/X scraping

BuiltWith API

Wappalyzer API

These belong under

Future Integrations.

---

## 8. Signal Storage

Every event becomes a signal.

Example

Company

Acme

Signal

Funding

Detected

2026-07-26

Weight

30

Signals remain historical.

Never overwrite.

Build a timeline.

---

## 9. Intent Analysis

Hybrid scoring model.

Step 1

Rule engine calculates

Base Intent Score.

Example

Funding

+30

Hiring

+20

Expansion

+15

Reddit

+8

Total

73

Step 2

Gemini receives

Campaign

ICP

Signals

History

Gemini generates

Final Intent Analysis

Including

Intent Score

Confidence Score

Reasoning

Recommendation

---

## Intent Score

Represents

Likelihood the company is entering a buying window.

---

## Confidence Score

Represents

How confident the platform is based on

Number of signals

Signal quality

Signal consistency

Not the same as intent.

---

## AI Recommendation

Every recommendation answers

Why should I contact this company today?

Example

Acme recently raised funding, expanded its sales team and announced European expansion.

These combined signals suggest the company is investing in revenue growth.

---

## 10. Intent Alert

User receives notification.

Contains

Company

Intent Score

Confidence

Signal Summary

AI Recommendation

Buttons

Ignore

Generate Account Brief

Approve

---

## Ignore

Dismiss alert.

Store dismissal.

Nothing else happens.

---

## Generate Account Brief

Runs only when clicked.

Never generate automatically.

Produces

---

## Why We Detected This Company

Intent Score

Confidence Score

Signals

Signal Contributions

AI Explanation

---

## Company Overview

Business

Products

Industry

Employees

---

## Business Model

---

## Recent News

---

## Growth Stage

---

## Competitors

---

## Public Tech Stack

Only if publicly discoverable.

Do not use paid APIs.

---

## Key Decision Makers

If available.

---

## Suggested Pain Points

---

## Suggested Outreach Angle

---

## Summary

Everything a salesperson needs before contacting the company.

---

## Approve

Only after approval

Continue workflow.

---

## 11. Contact Enrichment

Apollo Free

Retrieve

Decision Makers

Email

Role

Department

Store inside database.

---

## 12. Outreach Generation

Gemini creates

Cold Email

LinkedIn Message

Call Notes

All personalization must reference

Detected buying signals.

Never generate generic templates.

Generate only.

Never send.

---

## 13. CRM Integration

HubSpot Free

Automatically

Create Company

Create Contacts

Attach

Intent Score

Confidence Score

Account Brief

Generated Outreach

---

## 14. Dashboard

Dashboard includes

Monitoring Status

Campaign Overview

High Intent Leads

Intent Timeline

Signal Distribution

Approval Queue

Research Queue

Outreach Queue

HubSpot Status

Recent Signals

Dashboard refreshes

Every monitoring cycle.

Realtime sockets are unnecessary.

---

## 15. Notification Center

Dedicated notification inbox.

Categories

High Priority

Medium

Low

No popup-based workflow.

---

## 16. Company Detail Page

Every company has its own page.

Tabs

Overview

Timeline

Signals

Intent Analysis

Account Brief

Contacts

Generated Outreach

CRM Activity

Feedback

---

## 17. Company Timeline

Every detected event is stored.

Example

Funding

↓

Hiring SDR

↓

Expansion

↓

Intent Increased

↓

Approved

↓

Outreach Generated

Never lose historical data.

---

## 18. Feedback

After user interaction

Allow

Good Recommendation

Poor Recommendation

Meeting Booked

No Response

Opportunity Created

Closed Won

Closed Lost

Store feedback.

---

## IMPORTANT

For MVP

Do NOT implement automatic AI learning.

Store feedback only.

Future versions can use this data.

---

## 19. Database

Suggested tables

users

campaigns

companies

company\_signals

intent\_scores

intent\_alerts

account\_briefs

contacts

generated\_outreach

hubspot\_sync

feedback

notifications

---

## 20. AI Prompts

Create dedicated prompts for

Intent Analysis

Signal Explanation

Account Brief Generation

Outreach Generation

---

## 21. Design Guidelines

Modern SaaS

Minimal

Linear-inspired

Dark Mode

Professional

Dashboard-first

No unnecessary animations

Subtle glassmorphism

Enterprise feeling

---

## 22. Future Integrations

Display as roadmap only.

Do not build.

Bombora

6sense

RB2B

Leadfeeder

Clearbit Reveal

BuiltWith

Wappalyzer

LinkedIn API

ZoomInfo

Clay

Automatic Email Sending

AI Autonomous Outreach

## 23. Success Criteria

A user should be able to

- ✓ Create multiple monitoring campaigns
- ✓ Define an ICP
- ✓ Monitor only ICP companies
- ✓ Continuously detect buying signals using free/public sources
- ✓ View explainable Intent and Confidence Scores
- ✓ Understand exactly why each company was surfaced
- ✓ Ignore recommendations
- ✓ Generate detailed AI Account Briefs on demand
- ✓ Approve companies for downstream actions
- ✓ Enrich approved companies with Apollo
- ✓ Generate personalized outreach
- ✓ Push approved records into HubSpot
- ✓ Track outcomes
- ✓ Record feedback

The product should clearly demonstrate modern GTM strategy, AI reasoning, explainability, workflow automation, and thoughtful product design—not just outbound automation.
